SECTION -IV
SPECIAL CONDITIONS OF CONTRACT
(SCC)

The following Special Conditions of Contract shall supplement the General Conditions of Contract. Whenever there is a conflict, the provisions herein shall prevail over those in the General Conditions of Contract. The corresponding clause number of the General Conditions is indicated in parentheses.

1. SCOPE OF WORK:

The subject dredging work is being proposed by M/s Hindustan Urvarak&Rasayan Ltd. (HURL), a Joint Venture Company (JVC) of three Maharatnas CPSE's - M/s National Thermal Power Corporation (NTPC), M/s Coal India Limited (CIL), and Indian Oil Corporation Ltd. (IOCL) is developing Ammonia Urea Fertilizer Plant Gorakhpur in the premises of closed Gorakhpur Unit at FCIL.

The joint venture has been formed by Union Cabinet for the revival of the selected closed Fertilizer units. The fertilizer unit at Gorakhpur has been closed some time ago and HURL is in the process of revival of closed unit. The fertilizer plant requires about 32,400 Cu. Meter of fresh water per day for its operation and in order to meet the water requirement of the Plant, HURL propose to deepen the Chilwa Lake area (also known as ChilluaTaal or MahesaraTaal) to a depth of about 3.0 Mts to increase the storage capacity and to develop the adjacent areas. Dredging and removal of aquatic plants from the lake is required to be done in order to increase the storage capacity, improve the water quality and restoring the health of aquatic ecosystems. Dredging will also increase in storm/ storage capacity there by lowering the possibility of flooding during monsoon.

MahesaraTaal, also called Chilwa Lake is located in the North of Gorakhpur city, on the highway of Nautanwa towards Nepal. The lake requires desilting and dredging for removing the silt and increasing the depth to meet the water requirement of proposed plant.

Site information

MahesaraTaal is located in the North of the Gorakhpur city on the highway of Nautnva towards Nepal and adjacent to the Fertilizer Plant. Gorakhpur extends between the latitudes 26o42'30" North and longitudes 83o25'07" East. Gorakhpur is located in the east confluence of rivers Rapti and Rohini which is in the eastern part of the state of Uttar Pradesh in India.

The MahesaraTaal inflows receives through Mahesara lake channels flows through the forest area in the east and also floods back from rivers

Contractor Signature with seal

Rapti&Rohini confluence during monsoon season. River Rohini originates from Nepal and flows through the border. The highway and rail line crosses the Mahesarataal and parts the taal in east and west. NHAI – Gorakhpur – Ferenda – Nautanwa-Sonauli Highway Upgrade works are in progress.

The Mahesarataal is a eutrophic perennial lake. The maximum depth seen here is during the monsoon period of about 2.00 m with sludge deposition over 2.50 m in thickness. It submerges said to be about 1000 Ha of land. The mean annual rainfall of the area is 1245.67 mm. The relative humidity ranges from 36% to 91%. Hence the climate can be considered as sub-humid, sub-tropical monsoon.

Due to silt depositions over the decades and insufficient monsoon the Chilwa Taal has become like a canal during the off season. The main source of intake for the lake is from rain water and a portion of flood water from River Rapti&Rohini during monsoon. Presently only 15% of the lake area is filled with water and balance 85% land portion with grass. As per the information available, during the monsoon period 100% of the lake area will be filled with rainy water. In order to retain the water body throughout the year, the authorities propose to deepen the lake by 3 mtrs depth.
